Archives, museums, and libraries are pivotal to the management and preservation of any society's heritage. Heritage assets should be systematically managed by putting in place proper policies, maintenance procedures, security and risks measures, and retrieval and preservation plans. The Handbook of Research on Heritage Management and Preservation is a critical scholarly resource that examines different aspects of heritage management and preservation ranging from theories that underline the field, areas of convergence and divergence in the field, infrastructure and the policy framework that governs the field, and the influence of the changing landscape on practice. Featuring coverage on a broad range of topics, such as community involvement, records legislation, and collection development, this book is geared towards academicians, researchers, and students seeking current research on heritage management and preservation.

The volume "The UNESCO Memory of the World Programme: Key Aspects and Recent Developments" responds to the growing interest in the scientific study of the Memory of the World Programme (MoW) and its core concept of documentary heritage, which has received little attention from scholarship so far. This sixth publication in the Heritage Studies Series provides a first collection of differing approaches (including reflected reports, essays, research contributions, and theoretical reflections) for the study of the MoW Programme, offering a basis for follow-up activities. The volume, edited by Ray Edmondson, Lofnar Jordan and Anca Claudia Prodan, brings together 21 scholars from around the globe to present aspects deemed crucial for understanding MoW, its development, relevance and potential. The aim is to encourage academic research on MoW and to enhance the understanding of its potential and place within Heritage Studies and beyond.

Open government initiatives have become a defining goal for public administrators around the world. However, progress is still necessary outside of the executive and legislative sectors. Achieving Open Justice through Citizen Participation and Transparency is a pivotal reference source for the latest scholarly research on the implementation of open government within the judiciary field, emphasizing the effectiveness and accountability achieved through these actions.

Highlighting the application of open government concepts in a global context, this book is ideally designed for public officials, researchers, professionals, and practitioners interested in the improvement of governance and democracy.

In an age of scarcity and the challenge of electronic records, can archivists and records managers continue to rely upon traditional methodology essentially unchanged since the early 1950s? Using Functional Analysis in Archival Appraisal: A Practical and Effective Alternative to Traditional Appraisal Methodologies shows how archivists in other countries are already using functional analysis, which offers a better, more effective, and imminently more practical alternative to traditional appraisal methodologies that rely upon an analysis of the records themselves.

While web-based accessible materials have offered academic libraries an effective approach to managing electronic records and resources for its service population, a cross-discipline approach has not yet been executed. Cases on Electronic Records and Resource Management Implementation in Diverse Environments brings together real-life examples of how electronic records and resource management have been implemented across disciplines. Offering theories amid legal and ethical concerns of electronic records and resource management, this publication is essential for professionals involved in the education of library and information science and the training of individuals responsible for electronic records management in various disciplines.

The continuous development of new technologies has led to significant socio-economic advances in modern society. When applied in the medical sector, healthcare delivery techniques are optimized. Health Information Systems and the Advancement of Medical Practice in Developing Countries is a comprehensive reference source for the latest scholarly research on technology utilization for delivering reliable and accurate health information to patients and clinical staff.

Highlighting pivotal perspectives on topics such as mobile health, telemedicine, and healthcare access, this book is ideally designed for professionals, practitioners, researchers, academics, and graduate students interested in the benefits and challenges of technology applications in healthcare systems.

Doing Business 2014: Understanding Regulations for Small and Medium-Size Enterprises assesses regulations affecting domestic firms in 189 economies and ranks the economies in 10 areas of business regulation, such as starting a business, resolving insolvency and trading across borders. This year's report data cover regulations measured from June 2012 through May 2013. The report is the 11th edition of the Doing Business series.

One of the biggest challenges faced by any organization today is that of managing electronic records, a vital but complex undertaking involving multiple roles within the organization and strategies that are still evolving. Bringing together for the first time the views, experience and expertise of international experts in the records management field in the public and the private sectors, this book covers the theory and practice of managing electronic records as business and information assets. It focuses on the strategies, systems and procedures necessary to ensure that electronic records are appropriately created, captured, organized and retained over time to meet business and legal requirements. In addition to chapters covering principles, research and developments, there are case studies relating to practice and lessons learned. The chapters are written by a fully international line-up of contributors. Readership: This book explores issues and addresses solutions, not only for records professionals but also for information, IT and business administration specialists, who, as key stakeholders in managing electronic information, may have taken on crucial roles in managing electronic records in their organization. It will also be a key textbook for records management courses.

Over the past two decades, projects supported by the International Development Research Centre (IDRC) have critically examined the ways in which information and communications technologies (ICTs) can be used to improve learning, empower the disenfranchised, generate income opportunities for the poor, and facilitate access to healthcare in Africa, Asia, Latin America and the Caribbean. Considering that most development institutions and governments are currently attempting to integrate ICTs into their practices, it is an opportune time to reflect on the research findings that have emerged from IDRC's work and research in this area. "Connecting ICTs to Development" discusses programmatic investments made by IDRC in a wide variety of areas related to ICTs, including infrastructure, access, regulations, health, governance, education, livelihoods, social inclusion, technical innovation, intellectual property rights and evaluation. Each chapter in this book analyzes the ways in which research findings from IDRC-supported projects have contributed to an evolution of thinking, and discusses successes and challenges in using ICTs as tools to address development issues. The volume also presents key lessons learned from ICT4D programming and recommendations for future work.
